

SNF's Environment Policy

SNF strives to be the leading partner in a certain number of green applications such as water treatment, paper recycling and water retention in arid farming. The steps we have taken in favor of the environment (energy balance, Carbon footprint, sustainable development report) are closely linked to our activity. The ISO 14001 certification is an indispensable tool to our success in implementing this policy.

SNF's environmental road map is as follows:

- Act as a responsible company by protecting the environment as it relates to our activity.
- By being exemplary, in the respect of environmental regulations that apply to our facilities and products. Take into account this environmental component in our design and control processes.
- Include the environmental aspect in all our activities by :
 - Identifying the environmental factors and reducing the impact of the significant ones.
 - Implementing accident and pollution prevention plans.
 - Providing environmental objectives and following them through pertinent indicators in view of continuous improvement.
- Reduce the environmental impact of our activity, notably through the reduction of water and energy consumption.
- Calculate every year our Carbon footprint in order to evaluate our emissions of greenhouse gases and limit our carbon footprint.
- Monitor constantly the environmental performance indicators.
- Inform and motivate our employees and partners to act in an environmentally responsible way.
- Provide training in environmental matters inasmuch as they relate to the working post.
- Develop environmental literacy and inform our personnel of their contribution in the overall environmental policy of the company.
- Help sister companies of the group to benefit from our feedback.

Our environmental system must constantly evolve through continuous improvement and risk prevention.

Our objectives are regularly reviewed and revised according to the results obtained, new scientific knowledge, new state of the art available and modified business and social context.

The implementation of this road map requires periodical environmental performance reviews by means of indicators and action reports to all our employees and partners.

R. Hund
General Manager SNF SAS
